

INSTALLATION INSTRUCTIONS

EV WEST PEDESTRIAN BELL

Thank you for purchasing the EV West Pedestrian Bell. This is the perfect choice to complement your EV. Each bell is bench tested before it is packaged. If you need help installing your bell, our technicians are available to help. Please email support@evwest.com or call (888) 591-5830.

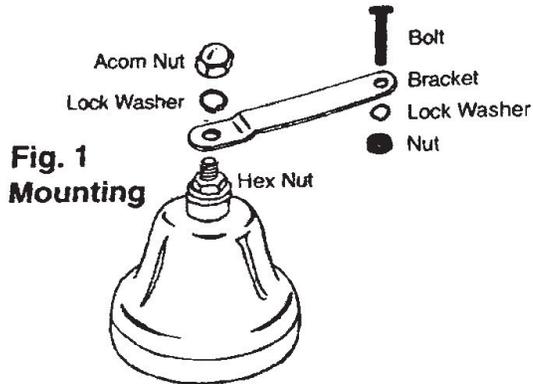

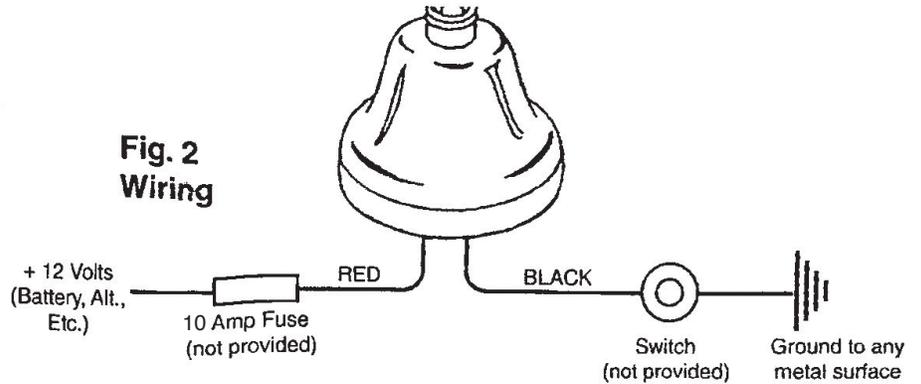

Fig. 2
Wiring

MOUNTING Fig 1:

1. Locate a mounting location that is dry and safe.
2. Drill a 5/16" hole at the selected mounting location. **IMPORTANT:** Inspect both sides of the mounting surface before drilling to ensure there are no hoses, wires or component parts that could be damaged.
3. Place the mount onto the bell's threaded bolt and secure bracket has been installed on the vehicle.
4. Mount the bell's bracket to the vehicle using the hardware provided.
5. Secure the bell to the bracket by tightening the acorn nut and the hex nut that is located under the bracket. NOTE: The hex nut was factory installed onto the bell's threaded bolt.

WIRING Fig 2:

6. BLACK WIRE: Is connected to on of the bell's switch terminal. (EV West sells a button switch)
7. HORN SWITCH: The other bell switch terminal is connected to ground or 12 volt (-) wire.
8. RED WIRE: Is connected to (+) 12 volt such as the vehicle battery or fuse block. Make sure this wire is fused to 10 Amps (fuse not supplied).

IMPORTANT: If you need lengthen the bell wires, use 20 gauge or heavier wire.

Installation is complete.

HOW TO USE BELL:

9. Press the bell switch once and release and the bell will ring once.
10. Press and hold the bell switch, and the bell will ring repeatedly until the switch is released.
